Quick Explanation:

The bot is an intra-day trading system based on a custom strategy I developed (not HFT). It executes long trades on the NASDAQ index according to a set of predefined factors for reversal trading specific trading hours ,(technical formations) starting one hour after the New York session), opens), news avoidance, VWAP deviation bands and other filters. The bot will not enter a trade if the price has crossed above the lower STDV 1 .band

Exit Rules:

Exits are based on VWAP deviation bands, the VWAP line itself, technical exit formations, and other specific rules (VWAP break, high-impact .(.news, certain hours, etc

Machine Learning Layer:

All entry and exit formations are evaluated according to their performance relative to the ATR -using a very simple machine learning model (K Means Clustering). The system classifies what works and what doesn't into three clusters based on performance over the last 10,000 candles. Patterns that underperform are moved to the "WORST cluster, which the bot ignores for entries and exits but the system continues to monitor them — if they start performing again, they are automatically reclassified to the "AVERAGE" or "BEST" clusters .allowing signals from those patterns to resume

Multi-Timeframe Structure:

The bot is built on TradingView and runs on the -AVERAGE and BEST clusters across 3, 4, 5, 10, and 15 minute charts, creating a smoothing effect. For example: If reversals trigger on the 3- and 4-minute charts that later fail, we lose with 2 contracts, but when a true reversal occurs, it will be reinforced by delayed confirmations on the 5-, 10-, and 15-minute charts (so contracts win). This structure filters 5 - 15 ,10 ,5 ,4 ,3 .noise and increases confidence

Communication Flow:

From TradingView, the trade signals are sent via JSON to a domain running a reverse proxy secured with SSL encryption. From there, they are forwarded to a dedicated Python server that executes the actual trades in NinjaTrader. It's also possible to replace the Python server with a C-based implementation (via Eliran) for higher speed, though in practice, latency is .not a critical factor here since this is not an HFT system

News Filter Bot:

An additional bot is used for news avoidance — it is preloaded with high-impact economic events and communicates locally with the main bot through localhost signals, instructing it to pause trading when .needed

Monitoring & Alerts:

A fault monitoring system continuously checks for errors or exceptions inside the bot and sends Discord alerts in real time if any issue occurs

Risk Management:

Advanced risk management is implemented: Stop losses in TradingView — two per timeframe, dynamically adjusted based on VWAP deviation bands. Maximum loss , per trade and per day, managed by the Python server which reads and stores each realized PnL with minimal deviation (minor discrepancies possible due to timing differences and no commission calculation). Emergency liquidation & account lock parameters are also defined .directly in NinjaTrader for safety

During all tests i tested it on live markets and I operated with low risk. My philosophy is that the edge must always .be allowed to play out, even during bad weeks or months So far, there haven't been any losing months, but it's essential to maintain margin for drawdowns or unexpected market traps — the same approach that protected clients and kept profits even during volatile .periods (e.g., Trump's tariff announcements)

Customizing:

**You can choose what JSON to send on every alert,
I have my formula, but you can change it easily if
needed (EXAMPLE: 0.5 deviation can be a stop
loss if we are above it, or can be a partial stop loss,
so can VWAP... HIGH STDV 2 (ABOVE VWAP STDV)
can be final destination or partial exit, etc...
contract amount can be easily set and changed
.based on amount of money being managed)**

Offer:

**Beyond the trading reports, I'd be happy to
provide one to two months of full free trial, so you
can test the system in your own environment and
build confidence in the bot's behavior. I'm not
looking for an exit or a quick sale, but for a modest
and honest long-term collaboration, receiving
either a small performance based fee or a monthly
.retainer for the bot's operation**

open for suggestions
